Desired Goal(s)

Interests
included:

- Housing market trends
- Predicting failure of Infrastructure
- Diagnostics for Healthcare
- Diagnostics for Machine Maintenance
- And a few more...

Decided
on:

- Predict the sale price of a house going up for sale

Goals

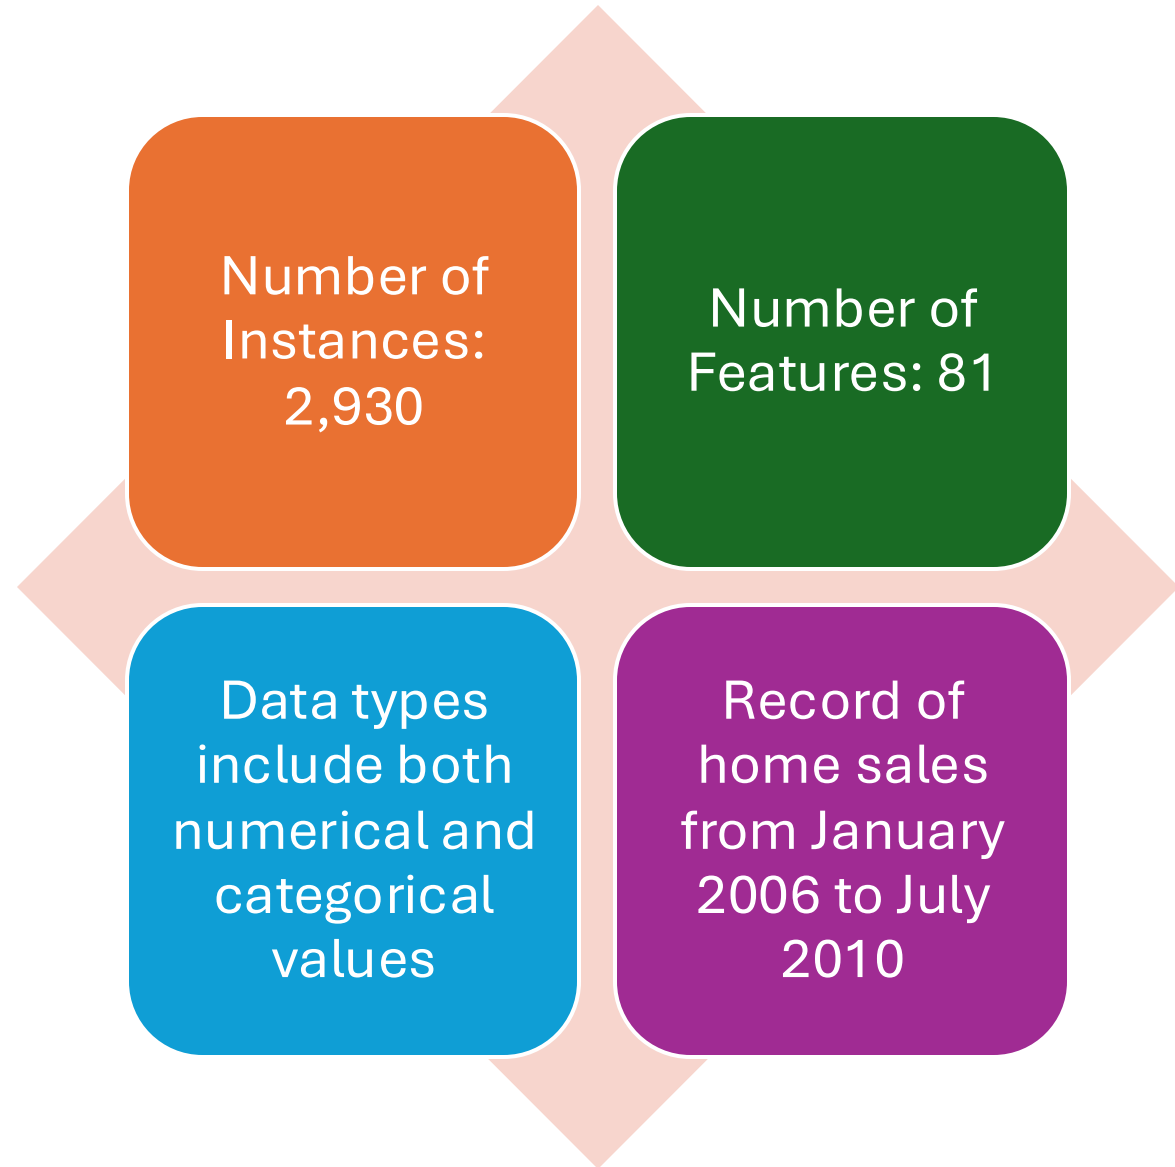

To be able to predict the sales price of a new listing

To be able to do “what-if” analysis by changing different features.

Selecting the Dataset

- We examined the available datasets on
 - Kaggle
 - Data.gov
 - FiveThirtyEight
 - Zillo
 - Redfin
- Chose
 - Ames Iowa Housing Sales from Kaggle
 - <https://www.kaggle.com/datasets/shashanknecrothapa/ames-housing-dataset>

Dataset Characteristics

Discovery

- Initial filtering 82 -> 13
- Number of desired features (42)
- Ratio of missing data by feature
- Correlation of features to actual sale price (picked top 13)
- Identified engineered features of interest
- Correlation of engineered features to actual sale price
- Scatter plots of all features having correlation $> .50$

Features in Final Data Frame

Retained 13 Raw Features

- MS SubClass
- Overall Quality
- Year Built
- Year Remod/Add
- Basement Finishings
- Total Basement Square Feet
- First Floor Square Feet
- Above Ground Living Area
- Number of Full Baths
- Garage Year Built
- Garage Finishings
- Garage Cars
- Garage Area

Encoded 6 Features w/ Ordinal Mapping

- Exterior Quality
- Basement Quality
- Heating Quality
- Kitchen Quality
- Fireplace Quality
- Functional

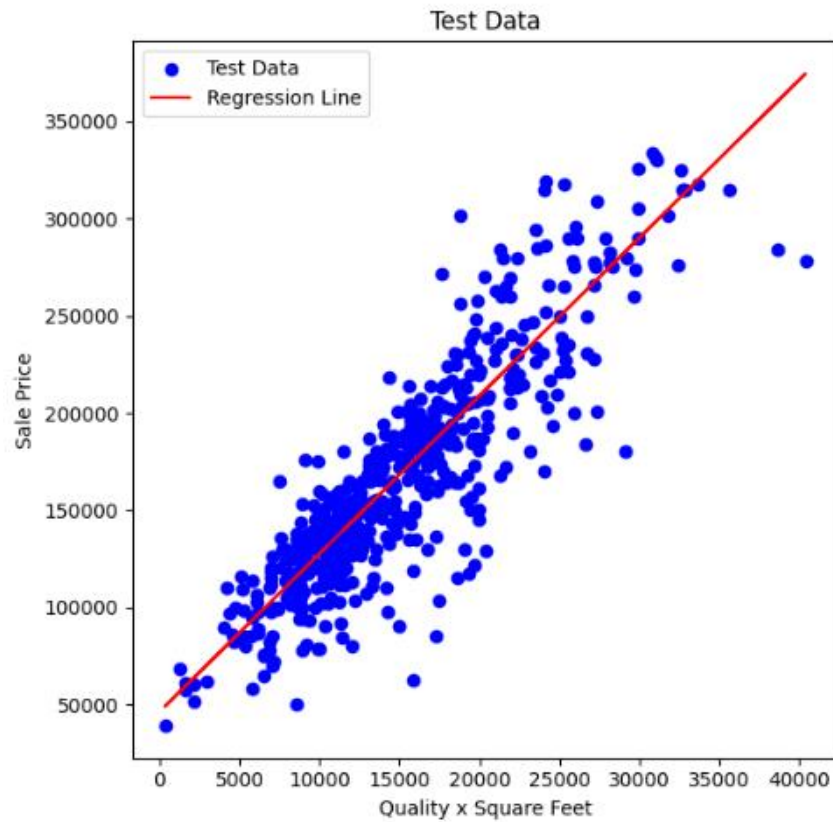

One-Hot Encoded 13 Features

- Neighborhood
- House Style
- Building Type
- Sale Condition
- Sale Type
- Garage Type
- Foundation
- Exterior Primary Materials
- Exterior Secondary Materials
- MS Zoning
- Lot Shape
- Lot Config
- Primary Condition

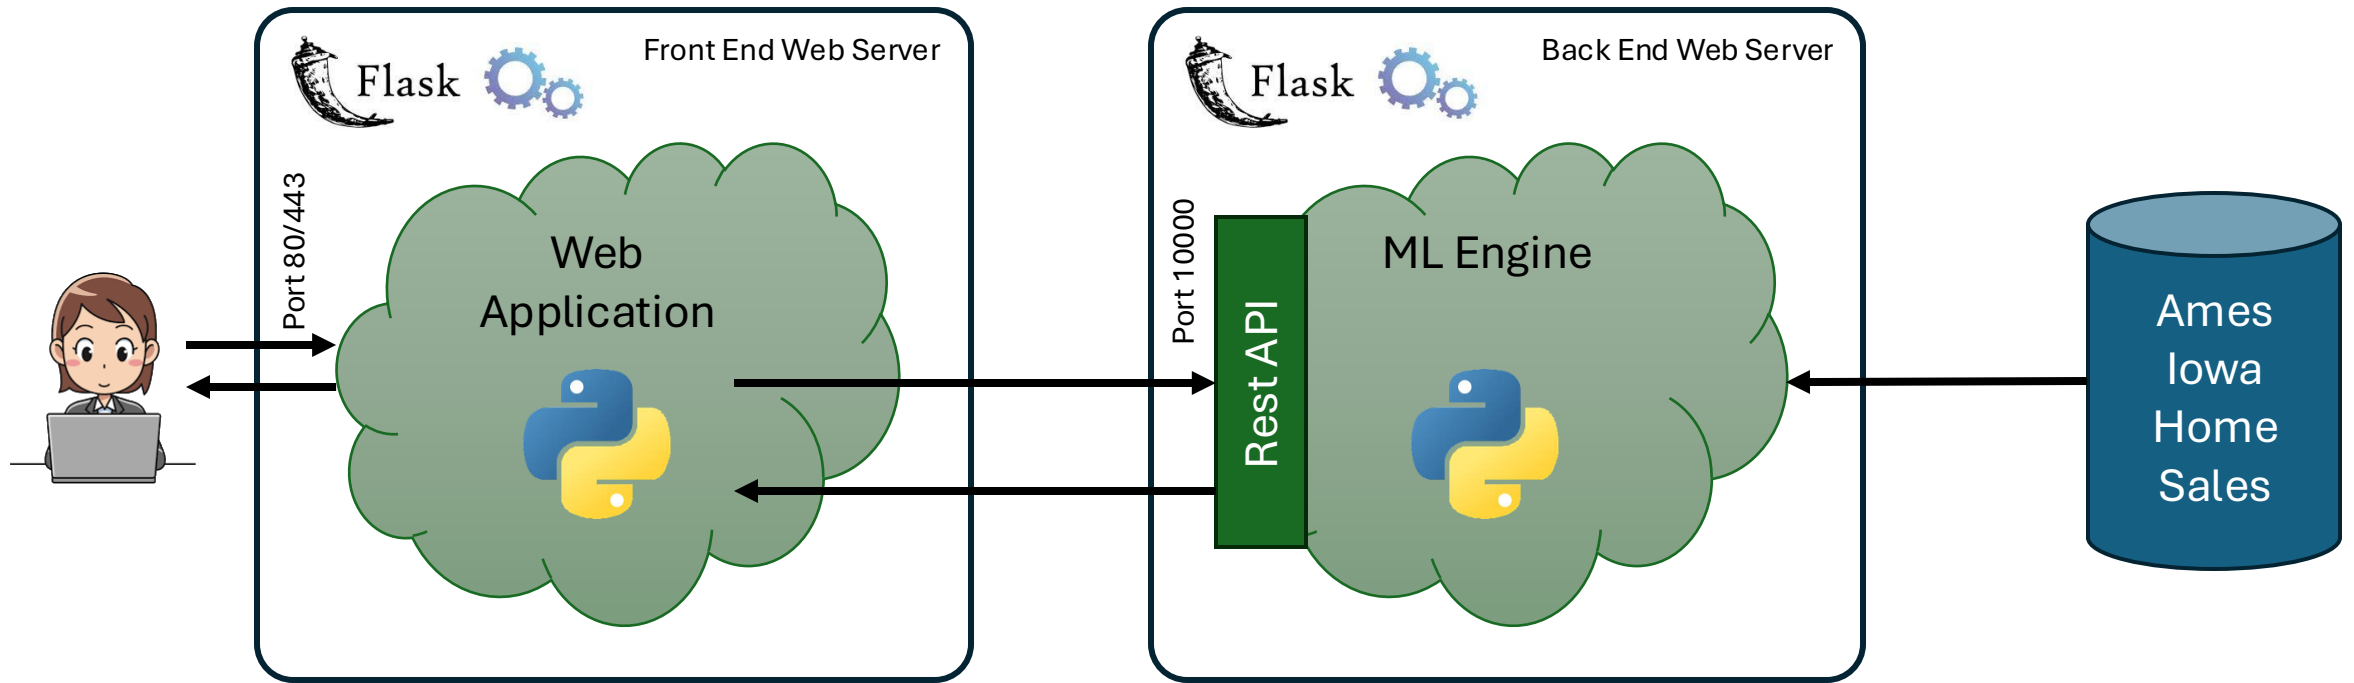

Engineered 10 Features

- Quality x Square Feet
- Sale Date (Yr Sold + Mo Sold)
- House Age
- Remodel Age
- Age Bucket
- Total Square Feet
- Total Square Feet w/ Garage
- Total Baths
- Price per Square Feet
- Season Sold

Analysis

Architecture

Presentation

Form for user to input parameters to predict price of home. The result of each request is saved as a table below, allowing “what-if” comparisons.

Each result of the input calculation is saved in a table. All columns of the table are sortable. This allows the user to perform what-if comparisons and to compare multiple properties.

Welcome to Petabyte Pirates!

On this page you can explore what a home should sell for by inputting various parameters and pressing the calculate button.

Overall Quality (1-10):

Above ground Living Space (Sq Ft):

Ground (first) Floor Living Area (Sq Ft):

Total Basement Square Feet:

Total Number of Baths:

Number of Fireplaces:

Garage Square Feet:

Number of Car Garage:

Year Garage Built (if detached):

Year Built:

Last Year Remodeled or Additions:

Calculation Results

| Overall Qual | Garage SF | Living SF | Ground Flr SF | Garage Cars | Total Baths | Year Built | Basement SF | Year Remod/Add | Garage Yr Built | Fireplaces | Suggested Price |
|--------------|-----------|-----------|---------------|-------------|-------------|------------|-------------|----------------|-----------------|------------|-----------------|
| 10 | 640 | 1750 | 1750 | 2 | 2.5 | 1980 | | | | 1 | TBD |
| 9 | 800 | 2400 | 1550 | 2 | 3.5 | 1975 | 600 | | | 2 | TBD |
| 6 | | 1200 | 1200 | 0 | 1 | 1955 | | | | | TBD |
